An ultrasound diagnosis apparatus comprising an ultrasound probe which includes ultrasound transducers, transmission/reception unit, a physiological characteristic image data generating unit which generates physiological characteristic image data, which is used to image at least one physiological characteristic of the object, an LOI setting unit which sets an LOI at an arbitrary position on a physiological characteristic image displayed, an M-mode image generating unit which generates an arbitrary M-mode image based on the physiological characteristic image data corresponding to the LOI, a setting unit which sets a profile position by using a cursor, a profile generating unit which generates a temporal profile of the arbitrary M-mode image at the profile position and a spatial profile of the arbitrary M-mode image which is associated with a line segment including at least the LOI, and a display unit which simultaneously displays the arbitrary M-mode image, the temporal profile, and the spatial profile.
